The out-of-pocket costs to an employee for health insurance and medical expenses for one year are shown in the table below.

**EMPLOYEE'S ANNUAL HEALTH CARE COSTS**

Type of Cost	Definition	Cost to Employee
Premium	Total amount employee pays insurance company for the policy	\$3,626
Deductible	Amount of medical expenses employee pays before insurance company pays for anything	\$500
Co-payment	Percentage of medical expenses after the first \$500 that employee has to pay	20%

According to the plan outlined in the table, total annual health care costs,  $C$ , depend on the employee's medical expenses for that year. If  $x$  represents the total medical expenses of an employee on this plan and  $x \geq 500$ , which of the following equations can be used to determine this employee's total health care costs for that year?

- B.  $C = 3,626 - 500 + 0.20x$
- C.  $C = 3,626 + 500 + 0.20(x - 500)$
- D.  $C = 3,626 + 500 + 0.20x$
