Grade(s): 9th, 10th, 11th, 12th

Which standards are students learning in this unit?

MA.912.G.2.2: Determine the measures of interior and exterior angles of polygons, justifying the method used.

MA.912.G.2.3: Use Properties of congruent and similar polygons to solve mathematical or real-world problems.

MA.912.G.2.4: Apply transformations (translations, reflections, rotations, dilations, and scale factors) to polygons. To determine congruence, similarity, and symmetry. Know that images formed by translations, reflections, and rotations are congruent to the original shape. Create and verify tessellations of the plane using polygons.

MA.912.G.2.6: Use coordinate geometry to prove properties of congruent, regular and similar polygons, and to perform transformations in the plane.

MA.912.G.4.1: Classify, construct, and describe triangles that are right, acute, obtuse, scalene, isosceles, equilateral, and equiangular.

MA.912.G.4.4: Use properties of congruent and similar triangles to solve problems involving lengths and areas.

MA.912.G.4.6: Prove that triangles are congruent or similar and use the concept of corresponding parts of congruent triangles.

MA.912.G.8.5: Write geometric proofs, including proofs by contradiction and proofs involving coordinate geometry. Use and compare a variety of ways to present deductive proofs, such as flow charts, paragraphs, two-column, and indirect proofs.

MA.912.G.8.6: Perform basic constructions using straightedge and compass, and/or drawing programs describing and justifying the procedures used. Distinguish between sketching, constructing, and drawing geometric figures.

LA.910.1.6.5 The student will relate new vocabulary to familiar words;
